Monofilament Stainless Steel

1300 mm

EN

BEST READ PRODUCT, READ THE FOLLOWING INFORMATION THROUGHLY.

Caution! This product contains materials composed of 100% stainless steel and wire and is not for surgical implants.

Only those medical devices which conform to the U.S. FDA's standards for surgical implants.

Device must be sterilized according to the European Pharmacopoeia (EP) for medical devices.

INDICATIONS

Steel sutures are indicated for use in abdominal wound closure, intestinal anastomosis, rectal resection and closure.

ACTIONS

Steel sutures induce a minimal acute inflammatory reaction in tissue, and are absorbable.

CONTAINMENTS

The use of steel sutures in tissue can cause an allergic reaction to the metal components, chromium and nickel. Additionally, the presence of steel may interfere with certain diagnostic tests, such as magnetic resonance imaging, and radioisotope scanning of the body.

WARNINGS

Steel sutures contain cobalt, which may be a cancer-causing agent.

Discard unused sutures.

Steel sutures are not designed for use in the eye.

Steel sutures should not be used for family planning or sterilization involving nonabsorbable sutures because employing steel sutures will result in the removal of the suture.

The use of steel sutures may result in a foreign body reaction.

PRECAUTIONS

Steel sutures are not indicated for use in the eye.

Do not use steel sutures in the eye.
