

Carbon Reduction Plan

Supplier name:Unisurge International Limited.....

Publication date: 19/02/2026.....

Commitment to achieving Net Zero

Unisurge International Ltd is committed to achieving Net Zero emissions by the end of **2040**. This is a **Ten-Year improvement** on the previous year’s plan targeting 2050, based on our commitment to the environment protecting future generations of customers.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2022	
Additional Details relating to the Baseline Emissions calculations.	
To date there has only been Scope 1 and Scope 2 reporting and following internal restructuring at the end of 2023 and beginning of 2024 Unisurge has now achieved the target of reporting partial Scope 3 emissions in 2024.	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO_{2e})
Scope 1	1536
Scope 2	373
Scope 3 (Included Sources)	XX
Total Emissions	1850

Current Emissions Reporting

Reporting Year: 2025	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	1568
Scope 2	252
Scope 3 (Included Sources)	1078 Upstream Transportation and Distribution (Partial) Freight inbound goods.
Total Emissions	2898

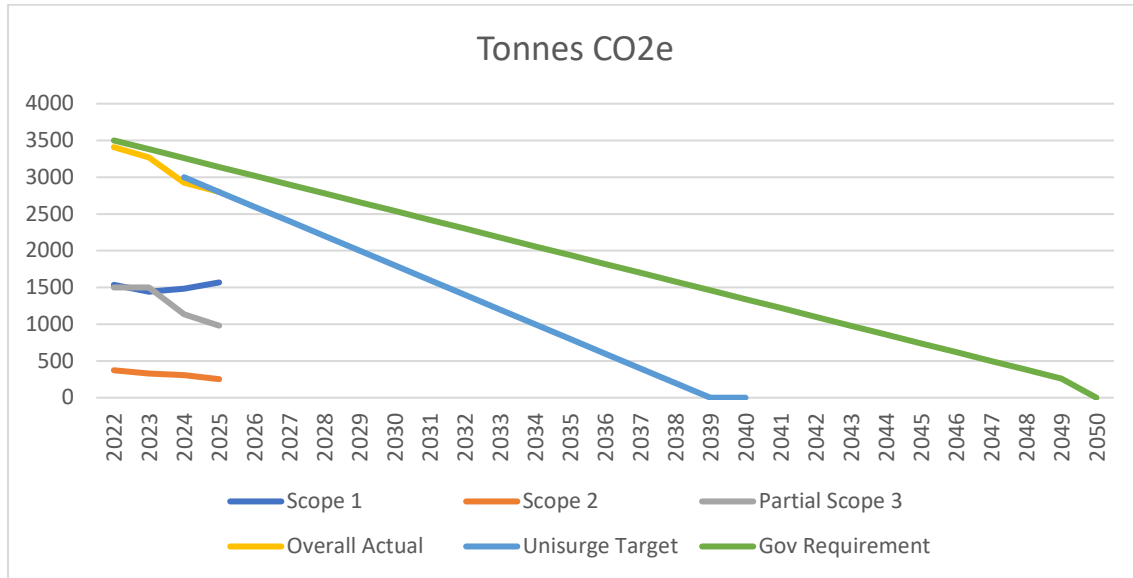

Emissions reduction targets

Unisurge targets have been generated following the internal restructuring process began at the end of 2023. The Head of Sustainability was put in place February 2024 and will be generating and controlling the emissions reduction plan. The final plan will be released in line with the Unisurge financial year ending 31st December annually.

In order to continue our progress to achieving Net Zero, we have adopted the following revised carbon reduction targets as we now have partial Scope 3 recorded. The scope 3 emissions in 2025 v 2024 year on year.

We project that carbon emissions will decrease over the next five years from 2926 tCO₂e to 1,905 tCO₂e by end of 2030. This is a reduction of 35% and will keep us ahead of our target.

Progress against these targets can be seen in the graph below:

Unisurge are on course to achieve Net Zero 2040.

Unisurge International Ltd are also recording an Intensity Ratio measurement in our SECR Annual Report, this has not improved compared to last year. It increased from 37 tonnes of CO₂ per £M turnover last year to 38.03 tonnes of CO₂ per £M turnover this year. This indicates that Unisurge International Ltd is generating less revenue per unit of greenhouse gas emissions. The lower the ratio, the less carbon the company emits relative to its economic output. Actions are in place to improve this ratio during 2026.

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

In accordance with SECR requirements, the following energy efficiency actions were undertaken during the reporting period:

- Unisurge International Limited has expanded the EV charging infrastructure at Newmarket to accommodate an additional four vehicles
- In relation to other energy and efficiency initiatives, further positive progress has been achieved through the migration to smaller and more efficient vehicles. The introduction of a new articulated vehicle has delivered an improvement of approximately 3 mpg, while the deployment of new 3.5-tonne vans with smaller engines is achieving an average fuel efficiency improvement of around 6 mpg.
- Unisurge International Limited will continue the phased rollout of these new vehicles across the fleet throughout 2026 and 2027, in line with the established fleet transition plan.

- During the reporting period, Unisurge International Limited also generated a total of 1,179,604 kWh of electricity through the onsite solar photovoltaic (PV) system. This clean, renewable energy contributed to reducing the reliance on grid-supplied electricity and lowered the carbon footprint.
- Of the total electricity generated, 781,743 kWh was used directly onsite to meet the operational energy needs, contributing to approximately 26.42% of the total electricity consumption.
- By utilising renewable energy onsite, Unisurge International Limited reduced the Scope 2 greenhouse gas emissions from purchased electricity by 138.37 tonnes of CO₂e, using the latest GHG conversion factors for electricity.
- Additionally, Unisurge International Limited exported 397,861 kWh of excess electricity back to the grid, further supporting the wider decarbonisation of the energy sector. This exported energy represents 34% of Unisurge International Limited's total generation, though it is not included in the total consumption figures as it was not utilised by Unisurge International Limited.
- The Company continues to identify further opportunities to improve energy efficiency and reduce emissions.

Working towards ISO14067:2018.

Unisurge International will be assessing the use of reforestation Carbon Balancing, this will only take place after all other opportunities have been exhausted and is expected to be reviewed by end of 2029. We are gathering the information to provide full year Scope 3 figures and will adjust the plan accordingly in future years.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

The 2024 UK Government GHG Conversion Factors for Company Reporting Emission Factors were used to calculate emissions. These factors were applied to energy consumption figures to calculate Scope 1 (direct emissions from gas and fuel usage) and Scope 2 (indirect emissions from purchased electricity). For Scope 3 emissions, appropriate conversion factors for freighting goods were applied. Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in

¹<https://ghgprotocol.org/corporate-standard>

²<https://www.gov.uk/government/collections/government-conversion-factors-for-company-reporting>

accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of Unisurge:
